

Lifting & fall protection equipment

Lifting equipment like chain slings, round slings or master links plays a crucial role in many industries. Fall protection equipment is used to protect people who are working at heights and includes e.g. full body harnesses, lifelines and lanyards. To ensure safety and compliance with regulations, it's important to regularly monitor and maintain this equipment. Failure to do so can lead to workplace accidents and downtime.

Real Time Equipment Monitoring

- Monitor the condition of lifting equipment in real time, see the bin location and status of your equipment (green, yellow or red)

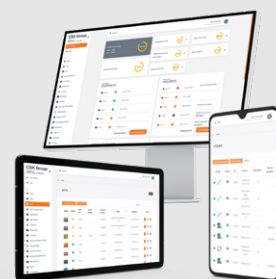

Monitor Expiry & Inspection Dates

- Monitor expiry dates to prevent the use of outdated and potentially unsafe equipment
- Receive notifications when replacements or inspections are needed
- Label items with unique QR codes showing service dates

Certification

- Keep all certificates up to date, and ensure that the equipment meets the necessary compliance requirements
- Access certificates from any device
- Upload certificates on each item
