Service kits &
service containers

Make sure that all necessary equipment is ready and available for specific tasks by creating service kits and service containers. It is important to track, organize, and manage service kits and containers, ensuring they are always complete, up-to-date, and ready for use.

⚒ Inventory Management
- Access full inventory of each service kit and container, including tools or spare parts and see the status of your equipment (green, yellow or red)
- See detailed information about each item in the kit

☑ Kit Overview
- Track important details such as the location (GPS tracking), condition, and history of each service kit
- Upload files and centralize all relevant documents and information for easy access
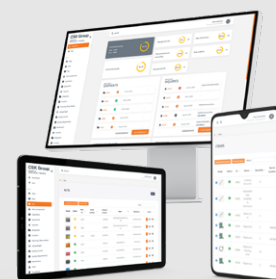

📥 Documentation
- Manage all necessary documentation associated with service kits, such as calibration certificates, safety data sheets, and instruction manuals
- Track expiry dates and receive notifications before equipment runs out of date

🧰 Service Kit Creation & Customization
- Create and customize service kits and sub kits for specific jobs or projects, ensuring that each kit contains the exact equipment required
